

JA Motors

Powerful compact motors for lift and lift/tilt systems

Key Features

- Quiet and reliable lift/tilt motors
- Powerful lift capacity up to 160 pounds
- Torque ratings of 6-12 Nm
- Double shaft take-off
- Thermal switch protection
- Easy limit setting

The Elero line of JA motors is designed for use in a wide range of window treatment applications such as horizontal blinds, pleated shades and cellular shades. These compact motors fit inside a 55 mm x 55 mm headrail. Internal limit switches provide for automatic shut off in both raised and lowered positions. The limit switches are externally accessible, easy to operate and easy to adjust. The JA motors have a limit range up to 85 revolutions of travel. Because the limits are a flush design, the motor can be installed either in an upward or downward position within the headrail. If a safety cut-out switch is required, it can simply be attached. The JA motors have internal capacitors and double shaft take-offs that allow for easy placement in the center of the headrail with shafts extended in both directions.

Elero offers a variety of adaptors to couple the motor shaft to the hexagonal, round or square drive shafts. All JA motors models are compatible with the Elero line of automated controls such as radio and infrared remotes, timers, sun and wind sensors, and low voltage controls. See the Elero parts list for controls and accessories.

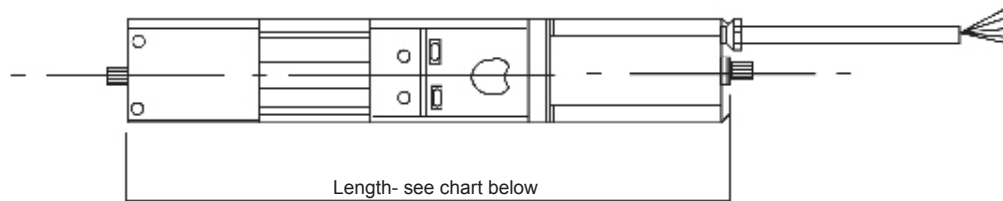

Technical Features

- 30 rpm
- 130 or 150 watts
- 1.15 or 1.35 amps

Model and Item Numbers

JA 06d Motor	35.712.0001
JA 12d Motor	35.532.0002

Dimensions

Model	Torque		Amps	Watts	Length
	NM	in. lbs.			
JA 06d Motor	6	52	1.15	130	12.82"
JA 12d Motor	12	106	1.35	150	13.79"
